PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience designing, developing, and deploying scalable backend and full-stack applications using JavaScript, Node.js, React.js, PostgreSQL, Docker, and AWS. Strong foundation in Data Structures & Algorithms, OOPs, low-level design, DBMS, and System Design. Experienced in architecting high-performance RESTful APIs, cloud-native applications, and distributed systems with a focus on scalability, reliability, security, and performance optimization. Proficient in building production-ready software, optimizing database performance, implementing CI/CD pipelines, and collaborating within Agile teams to deliver clean, maintainable, and efficient solutions that solve complex engineering challenges.

TECHNICAL SKILLS

Programming Languages: JavaScript (ES6+), TypeScript, Python, C++, Java (working knowledge)

Core CS Fundamentals: DSA, OOPs, Computer Networks, DBMS, Low-Level Design, System Design

Backend & APIs: Node.js, Express.js, RESTful APIs, Microservices, WebSockets, API Security, Authentication/Authorization

Databases: PostgreSQL, MySQL, MongoDB, Redis

Frontend: React.js, Next.js, Redux, HTML5, Tailwind CSS

Cloud & DevOps: AWS (EC2, S3, RDS, IAM), Docker, GitHub Actions CI/CD, Linux, Shell Scripting

Design & Practices: Design Patterns, SDLC, Agile, Version Control (Git), Distributed Systems, Scalability, Performance Optimization

PROFESSIONAL EXPERIENCE

Independent Software Engineer (Self-Directed)

Apr 2026– Present

- Architected and developed a scalable **Video Interview Platform** ([Live Link](#)) using **Node.js, PostgreSQL, Prisma ORM, WebRTC, and Clerk**, supporting secure concurrent **1-on-1 interview sessions** with room-based access control and isolated code execution, enabling a reliable and production-ready technical interviewing experience.
- Designed and implemented an **event-driven real-time collaboration system** ([Live Link](#)) using **WebSockets, React.js, Node.js, and PostgreSQL**, synchronizing project updates across multiple connected clients while achieving **sub-50ms REST API response times** through database indexing and query optimization.
- Containerized and automated application deployment using **Docker, GitHub Actions, and AWS**, enabling reproducible multi-environment builds, **zero-downtime deployments**, and a streamlined CI/CD workflow that significantly improved deployment reliability and release efficiency.

Software Development Engineer · TheRegiment

Dec 2024 – April 2026

- Built and maintained** scalable full-stack applications using **JavaScript, Node.js, React.js, PostgreSQL, and Docker**, supporting production-grade workflows and improving overall system throughput by **30%** through optimized application architecture and efficient resource utilization.
- Designed and implemented secure **RESTful APIs** using **Node.js, Express.js, PostgreSQL, and MongoDB**, reducing average API response time by **25%** through database indexing, query optimization, and efficient API design.
- Implemented a reusable **JWT-based authentication and Role-Based Access Control (RBAC)** framework using **Node.js, Clerk and PostgreSQL**, strengthening application security and reducing unauthorized access vulnerabilities by **40%** across multiple modules.
- Optimized frontend performance using **React.js, code splitting, lazy loading, and dynamic imports**, decreasing page load time by **35%** and increasing user engagement by **20%** through faster rendering and improved user experience.
- Collaborated with cross-functional teams in an **Agile** environment using **Git, GitHub, and CI/CD workflows**, delivering production-ready software with high code quality, maintainability, and timely feature releases.

Associate Software Engineer · Enveu Software Technologies

Dec 2023 – Nov 2024

- Developed and maintained cloud-native backend services using **AWS EC2, RDS, S3, Node.js, and PostgreSQL**, supporting production workloads while improving API performance by **25%** through infrastructure and database optimization.
- Built and automated **CI/CD pipelines** using **Docker, GitHub Actions, and AWS**, enabling zero-downtime deployments and maintaining **99.9% service availability** across multiple production environments.
- Collaborated with engineering teams to troubleshoot production issues using **Linux, Bash scripting, log analysis, and performance profiling**, improving deployment reliability and accelerating incident resolution across distributed services.
- Participated in Agile software development by contributing to feature implementation, code reviews, bug fixes, and deployment activities, ensuring high-quality software delivery while adhering to engineering best practices.

EDUCATION

Bachelor of Technology (Hons) – Computer Science Engineering, Lovely Professional University *2020 – 2024*

CGPA: 8.20 / 10
